

Property Services

One place for all property safety and compliance records

How it works

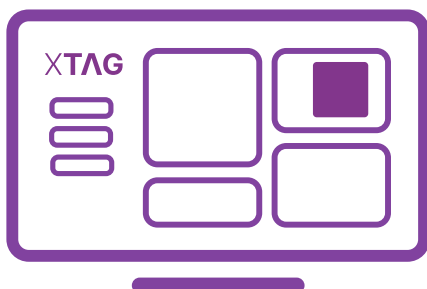

Install the Tag

Installing a Tag assigns a unique ID to your property. Your operative taps their smartphone against the Tag to sign in to the property and begin their work. The Tag enables you to effectively capture the time, date and location of all works.

Capture your top tasks

Your operative uses our app to record the task they are carrying out. The structured data captured from the task is sent back to your X Tag Portal in real-time, available for review. Once completed, task dates can also be reset to ensure the property is maintained on time.

Report on the data

Installing a Tag assigns a unique ID to your property. Your operative taps their smartphone against the Tag to sign in to the property and begin their work. The Tag enables you to effectively capture the time, date and location of all works.

Features

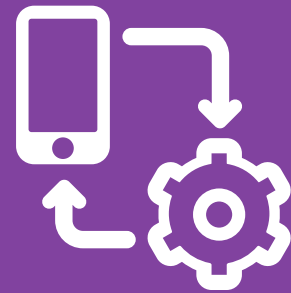

Unlock complete compliance

Property Services enables you to capture any and all work that has been conducted at your properties, from compliance tasks to visits. All of this real-time information is sent to your portal so that you can instantly see the status of your portfolio.

Transferable technology

We are always updating and developing our technology to meet our clients' needs and this means it has become very adaptable. Via Property Services, you can capture a variety of essential information regarding the work taking place in your property, including safety and compliance.

Real-time assurance

Our real-time technology provides you with independent and impartial assurance that the right person has carried out work at your property. All access attempts are also geo-tagged and time-stamped, which can help resolve disputes.

Build your comprehensive property database

Property services enables you to collect the data you want around a range of tasks, including cyclical maintenance, electrical works, disrepair, heating and plumbing, remedial works, tenant liaison visits, fire risk assessments, and many more.
