

Fire Door

Simply monitor and manage
all of your inspections

How it works

Set up your inspection plan on the X Tag Portal

Our portal gives you the ability to simply roll-out your three month, six month or annual fire door inspection regime.

Install the Tag

The Tag is installed in the property and acts as an identifier. Inspectors tap the tag to sign in to the app and start the process, allowing you to effectively demonstrate the time, date and location of all work.

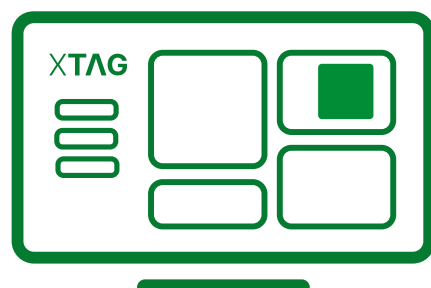

Record inspection

Your inspector uses our app to record the important information around your fire door stock and is prompted to follow a best practice method of inspection, installation or repair.

Report on compliance and stock condition

At the touch of a button a wealth of accurate data surrounding your fire door stock is available for you to report on. Measure your performance, analyse trends and ensure compliance.

Features

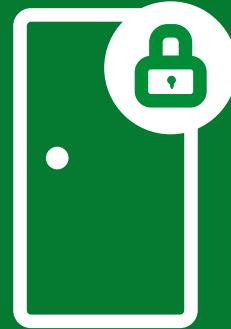

Only allow selected inspectors to conduct work

X Tag gives you the ability to only allow your selected inspectors to conduct work at your properties.

Audit trail of attempted access

Inspectors who can't gain access to a property can easily log their attempts. These access attempts are geo-tagged, time and date stamped, which helps resolve any potential disputes.

Conduct desktop audits of stock

Photographic evidence captured during the inspection process enables asset and compliance professionals to easily conduct visual audits on their fire door stock.

Issue notifications

Notifications are created in real-time for fire doors which are classed as not up to standard helping you to quickly react and manage any remedial action required.
