Deep Cleaning

SafeGroup is a national leader in carrying out hygienic deep cleaning, helping customers maintain the strictest hygiene standards. We work across all sectors, including healthcare, catering and hospitality, manufacturing assisting in-house cleaning teams in protecting staff and customers from the risk of infection.

SafeGroup hygienic deep cleaning teams have the expertise and experience needed to safeguard businesses, their staff and customers.

We use the latest cleaning technologies, combined with precise and thorough application, to ensure our hygienic deep cleans achieve the results our customers require.

Wearing full PPE, our operatives complete a full deep clean of all hard surfaces with a detergent-based cleaning agent. This removes any grease, contaminants, dirt, oils and biofilm.

Decontamination

SafeGroup is a leading COVID-19 decontamination specialist. We combine expertise in safe bio-hazard cleaning with investment in the latest virus disinfection technologies to support clients during the pandemic.

Our COVID-19 decontamination services are trusted and relied upon by some of the UK's biggest organisations. The safety of our customers and teams is our paramount concern. All our work is guided by bespoke risk assessments and method statements (RAMS).

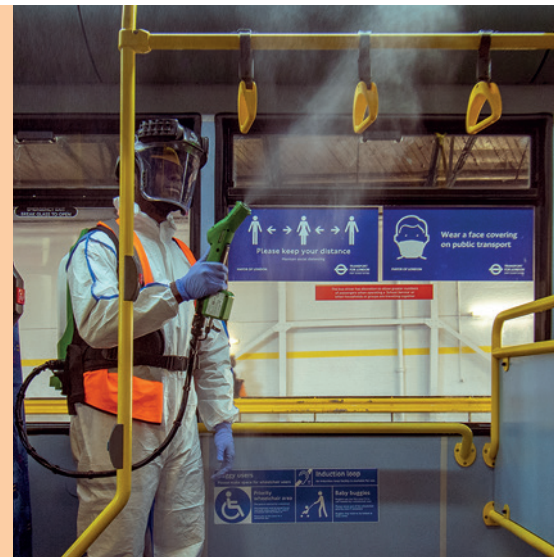

COVID-19 electrostatic spray disinfection

SafeGroup uses electrostatic spray technology proven to be greater than 99.99% effective against COVID-19. The ultrafine ionised mist spray wraps around objects, greatly improving coverage.

Scientific studies show the specialist non-toxic disinfectant we use bonds to surfaces, actively destroying the COVID-19 virus and providing ongoing protection.

The system is:

- Scientifically proven
- Quick to apply
- Fast acting
- More effective than conventional area fogging
- Repeatable to maintain protection

If your organisation is affected by a COVID-19 outbreak, we will respond rapidly to safely and thoroughly disinfect your premises, furnishings and equipment, helping you protect and reassure staff and customers.

Waste Removal for COVID-19 Testing

SafeGroup provides a safe, compliant and highly responsive service to collect and dispose of offensive waste associated with PCR test kits, lateral flow test (LFT) kits and PPE waste.

Our process follows government guidance through the Environment Agency regarding the collection and safe onward disposal of offensive waste such as LFT cartridges and associated paraphernalia, eg PPE.

This is how our simple 4-step service works

1 We bring UN approved flat packed offensive waste bins to your premises. Once filled, simply seal the bin and move it to your agreed dedicated location

2 At agreed time intervals – i.e. daily, weekly – we collect your Lateral Flow Test Kit and PPE waste*

3 We provide you with replacement flat packed UN approved flat packed offensive waste boxes at each visit

4 In line with Government guidance SafeGroup incinerate your waste and provide full documented paperwork

SafeGroup can leave boxes and bags as required on sites thereby operating an exchange system to minimise contact risk.

*Where there are low volumes of waste or ad hoc collections we are also able to collect tiger bags unboxed.

Regulations are changing rapidly in this area and SafeGroup will ensure that the waste is correctly coded/stored/transported and treated in line with the latest guidance.

Antimicrobial Surface Coating

Introducing a new concept in environment hygiene.

Touchpoint Shield™, from SafeGroup, is an advanced antimicrobial coating that prevents the build-up of bacteria and viruses, including SARS-CoV-2, on both hard and soft surfaces.

Touchpoint Shield™ helps our clients protect their teams and customers against potentially harmful microorganisms, enhancing wellbeing, while significantly controlling cleaning costs.

**NEW
Service**

Touchpoint Shield™ – 6 Key Benefits

- ✓ Destroys harmful microorganisms including SARS CoV-2
- ✓ Highly durable – lasts up to three years
- ✓ Near invisible – no change to look of space
- ✓ Reduces cost through reduced touchpoint cleaning
- ✓ Improves staff and customer confidence and wellbeing
- ✓ Sustainable support for long-term hygiene strategies in new 'hybrid' work environments

Unique antimicrobial coating

Touchpoint Shield™ combines the durability of a nanoceramic coating with the proven anti-microbial power of silver ion technology.

Laboratory tests have proven Touchpoint Shield™ to be 99.9+% effective against SARS-CoV-2 and a range of bacteria that commonly cause illness.

Field trials have shown clients can reduce high touchpoint cleaning by up to 80% while improving antimicrobial protection.

- + Proven protection against microbial threats
- + Enhanced reassurance and wellbeing
- + Reduced cleaning cost

Touchpoint  **Shield™**
