The Project

Our HTC measurement was used to understand the maximum space heating demand and to accurately size/specify an air Source heat pump

The Measurements

Designed thermal performance: **665.0 W/K**

Measured thermal performance: **471.8 W/K**

Performance Gap: **+29%**

The Outcomes:

- Circa £5K savings on heating equipment
- Heat pump achieved operation excellence and reduced associated running costs
- Instead of installing EWI, funds were instead allocated to a new kitchen
