

Product Summary:

Using URIMAT waterless urinals saves a huge amount of water compared to traditional flushing urinals. Typically each URIMAT urinal saves 100,000 litres of water per urinal per year. Clients also realise a sewage cost saving, as sewage costs are calculated based on water usage. Each bowl is made of a super-smooth polycarbonate or ceramic material to which deposits cannot stick, and is specially moulded with no pipes, awkward corners or sharp edges to clean.

Example Benefit Analysis:

Product	Supply, installation and Y1 maintenance cost	Water saving	Carbon Savings	Potential Savings	Payback
URIMAT waterless urinals	£8,153	3.5 million litres	628kg	£17,000	5.5 months

Figures based on 17 waterless urinals installed in a large food processing site. The company was paying £4.86 per cubic meter for its water and using 3.5 million litres of water per year flushing its urinals.

Additional Benefit:

Client Benefits

- Save 100,000 litres of water per urinal per year
- Cut urinal cleaning and maintenance costs
- Odour-free operation when correctly maintained
- No more blocked waste pipes
- URIMAT system is entirely chemical-free
- ROI between 6-24 months

Value Added Features

- Advertising opportunities on each urinal
- Trial installations available where suitable
- Carbon-neutral production process
- 100% recyclable polycarbonate bowls
- Significantly improved washroom ambience
- CO2 reduction of at least 175g per m3 of water saved
