The Aguardio Shower Sensor is more than just tech; it's a hotel concept that motivate changes in shower behaviour without compromising bathroom fixtures

- Data collection for effective interventions instead of behavioural design
- Access to humidity data to reduce risk of mould, improving health and safety standards

### Third-party documented effect

“Shower duration was 13.56% shorter when a real-time shower clock was visible. A 21.27% reduction was average when this smart technology was combined with pro-environmental behaviour statements, e.g. via stickers on the shower wall”
