"The team needed a readymade, re-usable and adaptable system for a fast track fit out contained within a live environment. Westgate's Hoardfast was selected on this basis and met the criteria. The team are extremely happy with the system and would recommend the system."

John Sisk & Son Ltd is an international construction company who were working with a client in need of a quality office fit out at Three Park Place.

Westgate Global's free-standing temporary hoarding system Hoardfast, was chosen to create **internal site rooms** for the duration of this project, providing **essential office and welfare spaces** for contractors on site.

The Hoardfast modular system made up of panels, supports and finishing U-channels, is very **quick, clean and easy to install**. The Hoardfast uPVC system is lightweight so can be easily installed and subsequently demounted and reconfigured around site, so **ideal for multiple projects or phased work**.
