

**Company:**

Overbury

**Location:**

60 London Wall

**Overview:**

Tunnel for safe client passage through construction works

**Solution:**

Hoardfast uPVC

Westgate Global was selected to supply a uPVC hoarding client corridor for Sixty London Wall, a Grade A office building. Overbury, specialists in fit-out and refurbishment, required a protective tunnel on the 4th floor to ensure safe client access to the site office during the fit-out phase.

The chosen solution was the Hoardfast uPVC system at a height of 2.7 metres. Designed with a dog-leg layout and double emergency exit doors, the **tunnel prioritised both functionality and safety**. A site visit was conducted to assess requirements, and the design included a lid for added protection.

Westgate worked closely with Overbury, addressing installation queries and **delivering a cost-effective, high-quality solution**. The supply-only installation was completed in just two weeks, meeting strict timelines without compromising safety or aesthetics.

The project's success was attributed to the strong partnership between Overbury and Westgate, efficient communication, and the reliability of the Hoardfast system. The result was a practical and visually appealing client corridor, perfectly tailored to the project's needs.
