Recognising the need for efficient site welfare accommodation, and **effective dust and noise control** measures during a specialist five floor office fit out project, Signature London asked preferred supplier, Westgate Global, to provide a solution using Hoardfast.

In Signature London's latest project, **ensuring the safety and comfort of workers, volume of work and mitigating dust and noise pollution**, within the building containing live office environments, were paramount to the success of the restorative project.

Using Hoardfast uPVC panels fixed floor-to-ceiling, Westgate Global created **dust-free temporary welfare spaces**, including offices, restrooms, break rooms, and storage facilities. These provisions ensured workers had quick easy access to amenities, **reducing disruption to completed floors and saving time** travelling to and from external portable cabins.

Noise reducing Hoardfast Soundscreen panels were also used to **create an office space for tenants to hold confidential meetings**, while works were conducted on their floor. Once completed, Signature London continued to use the office as their main meeting room to hold business sensitive conversations.

On completion, Signature London can reuse and relocate the panels for use on their next project, or if panels are near end of life, return them to Westgate Global for recycling.
