Wates Construction were working on the redevelopment of One Sherwood Street at Piccadilly Circus, transforming the space behind the iconic Piccadilly Lights into offices, shops and apartments.

Wates required **temporary welfare facilities to accommodate workers on site.** Due to the site's busy central London location, the use of traditional cabins were not an option. **The open site also required weatherproofing** as it was imperative to keep the floor plate clean and dry to continue on site works.

Key considerations for Wates in choosing Hoardfast Firescreen was creating a **clean, smart and permanent look to the facilities** for both employees and passers-by, despite the temporary and reusable nature of the system was crucial.

The sustainable nature of the standard uPVC system being made from 85% recycled materials and fully recyclable at end of life, plus the **ability for the Firescreen system to be installed internally to create employee site rooms and double-up as external weatherproofing** for the site was a key factor, as well as the speed of install / demount.
