MULTIPLEX

"The Westgate Global system proved to be an outstanding solution which allowed us to quickly establish a high-quality welfare facility".

Westgate Global were involved in a project with Multiplex Construction to provide a range of temporary welfare facilities for a new build construction site in central London. The skyscraper under construction, will occupy a prominent site in the financial district.

Modular Hoardfast uPVC panels were supplied to provide a system that could be **installed, demounted and reused** throughout the project. This also meant that there was **less time wasted** ordering more hoarding during the project. Hoardfast uPVC panels are manufactured from **85% recycled materials**, so they also offer a sustainable product for the customer.

Hoardfast uPVC created: **40 toilet cubicles, 3 shower cubicles, a separate room to house urinals, sinks and hand dryers.** Westgate Global also supplied 400 linear metres of Firescreen panels and 32 doors to create site offices, a canteen, drying room, storage areas and subcontractor offices.

The Hoardfast Firescreen panels are **60-minute fire rated panels** adhering to the EN 13501-2:2008 (Surpasses Class 0) European standard to ensure projects meet health and safety regulations.
